

Application Advice

PREPARATION OF THE BASE

The base on which the laying will be effected, must be perfectly smooth, uniform and white.

A different colour damages the aesthetic look of the final result.

THE GLUEING OPERATION

White C2 glue, as per EN12004, must be used.

By using the smooth side of the trowel, the glue has to be spread out uniformly on the base (2 sq.m. approximately).

By using the jagged side of the trowel (2 or 3 mm.), comb the glue.

THE LAYING OF MOSAIC TILES

Adhere the sheet to the surface by pressing with a rubber trowel.

It is important to make sure that the distance between one sheet and another is the same as the one among the tesseras so that all the joints look alike.

We suggest to join the sheets when it comes to laying.

GROUTING

Joints must be clean, dry and free from dust.

The remains of adhesive, after laying, must be removed while it is still fresh.

Use grouting paste, RG type, as per EN 13888, spread it out with a rubber trowel.

CLEANING

Let it dry until the paste gets brightless, superficially, and then proceed to clean it with a sponge soaked in water.

Once it gets dry, remove it with a dry cloth.
